Ukima Park

Information to the Park

Ukimagaike (pond)

It was originally the main stream of the Arakawa River. The great transformation in the early days of the Showa, paved way for the residual part of the embankment forming the origin of the current floating pool. With an area of approximately 4 hectares and a water depth of 2.5 meters, it was completely opened as a free fishing pond in the 52nd year of the Showa era (1977). Use of reel fishing rods and bait to fish are prohibited.

Aquatic plants

In the northern part of the pond, there is a protected area for aquatic plants including reeds and wild rice that have been growing on the banks of the Arakawa River. There is also an aquatic botanical garden on the east side.

Primrose

In the areas of the river where there is abundant sunshine, wild primroses have been growing. Now, many wild plants are extinct due to river diversion and riverside protection construction. In order to protect these endangered species, a 1600m² nursery is reserved to cultivate these plants at a corner of the park. In spring, the nursery is open to the public (only during the flowering period). Aquatic Botanical Garden

Relaxation and Entertainment

There are sport venues including baseball fields and tennis courts in the park. Also there are ven-ues for recreation facilities such as the Boken-hiroba square and the Chibikko-hiroba Square. During cherry blossom season, there are many tourists and visitors. Every year, the Jabujabu pond is open to kids during the summer vacation, and children can enjoy playing in the water in the pool. (Age Range: From toddlers not using diapers to primary school students)

Bird Watching

Since the park is located on the waterfront, waterfowl are in abundance. Occasionally, there are also seagulls flying far from Tokyo Bay. The most common bird is the wild duck. From mid to the end of November, about 900 to 1,000 wild ducks come to the area, flying around the pool and the Arakawa river.
